Carcass dollar values when totaled may differ slightly from total settlement amount, due to 2 digit rounding in carcass allocation calculations
 Marbling, Ribeye Area and Backfat measurements are determined from a camera vision system. Measurements are taken from an image of the 12th and 13th rib interface. The backfat measurement is not adjusted for fat cover at other locations on the carcass.
 For Grid payment purposes, Quality Grade and Yield Grade are determined by camera vision system using USDA approved equation
